📞 619-623-5834

📄 aidan-mcdowell-826b9722a

<> Skills

Languages

TypeScript, JavaScript, Python, C++, C#, SQL (PostgreSQL/MySQL), Bash, PowerShell

Frontend & Mobile

React, Next.js, Tailwind CSS, HTML5, CSS3, Swift

Backend & APIs

Node.js, Express, REST APIs, GraphQL, Supabase, Vercel Serverless

Cloud & DevOps

AWS (EC2, S3, Lambda, CloudWatch), CI/CD (GitHub Actions, Jenkins), Docker, Linux/Unix

AI & Data Infrastructure

Vision APIs (Gemini, Groq), OCR Pipelines, Mixpanel, Google Analytics

🎓 Education

California State University, Fullerton

Bachelor of Science, Computer Science
[Dean's List](#)

🔗 Involvement

Pi Kappa Alpha Fraternity

Vice President & Webmaster

- Directed operational policy and executive alignment for 80+ active members.
- Architected web portal, automating recruitment intake and alumni databases.
- Executed philanthropy campaigns raising \$15,000+ for community partners.

San Diego Food Bank

Volunteer (Feb 2026–Present)

- Coordinate weekly packing and food distribution logistics for local families.

🏢 Experience

Full-Stack Engineer

TruLuv

Dec 2025–Current

Remote

- Developed core web application architecture using React, TypeScript, and modern state management, optimizing DOM rendering cycles and eliminating client-side latency across core user workflows.
- Engineered RESTful API endpoints and integrated third-party services, standardizing JSON payload serialization, request validation, and backend error handling to cut response latency.
- Conducted systematic codebase refactoring across legacy repositories, resolving architectural technical debt, hardening edge-case handling, and increasing unit test coverage across critical user paths.

DevOps Engineer

Arrow

Aug 2024–May 2025

Remote

- Architected and maintained automated CI/CD deployment pipelines in GitHub Actions, implementing automated test suites, linting gates, and multi-stage container builds to reduce release cycles by 40%.
- Provisioned and monitored scalable AWS cloud infrastructure (EC2, S3, CloudWatch) with automated health checks, maintaining 100% production uptime across production and staging environments.
- Collaborated with engineering teams to diagnose deployment bottlenecks, establish isolated staging environments, and audit cloud resource allocations to reduce infrastructure overhead.

Web Developer Intern / Tech Lead

National Youth Adoption Foundation

Jan 2024–Jun 2024

Remote – Chicago, IL

- Led the full-stack redesign and deployment of the organization's primary web platform, implementing responsive UI component hierarchies and robust security practices.
- Managed technical onboarding and daily code reviews for new interns, enforcing Git branching workflows, code quality guidelines, and documentation standards.

SEO Engineering Intern

Now Mobile Ordering

Aug 2024–Jan 2025

Remote

- Audited search indexing, site architecture, and organic user traffic flows using Google Search Console and SE Ranking to pinpoint and resolve conversion bottlenecks.
- Optimized frontend asset delivery and Core Web Vitals (LCP, FID, CLS), accelerating page load speeds to drive double-digit conversion gains.
- Engineered dynamic JSON structured data schemas across landing pages and conducted controlled A/B split tests to enhance search visibility and keyword ranking.

Technical Project Manager

GALLI Media

Oct 2025–Dec 2025

Remote - Los Angeles, CA

- Directed technical roadmaps, architectural requirements, and delivery milestones for media technology initiatives, running structured bi-weekly engineering sprints.
- Established standardized backlog grooming, automated QA testing workflows, and deployment gate checks to eliminate release blockers and guarantee predictable feature delivery.

📁 Projects

Menutrition

Aug 2026

- Engineered a mobile-first nutritional analysis web application using React, TypeScript, Tailwind CSS, and Vercel serverless architecture to deliver instant macronutrient calculations.
- Built an automated asynchronous OCR data extraction pipeline utilizing Google Gemini and Groq Vision APIs to parse unstructured menu imagery into verified JSON nutritional datasets.
- Implemented persistent client-side caching and dynamic client-side filtering algorithms, enabling instantaneous meal tracking and custom ingredient adjustments with zero server latency.

TheBypasser

- Architected and scaled an open-access web utility that strips multi-layered ad-wall redirects and forced interaction scripts, handling peak traffic exceeding 5M+ monthly active users.
- Led a 5-developer team across fast-paced release cycles, reverse-engineering third-party anti-scraping mechanisms and deploying real-time DOM parser patches within hours of upstream changes.
- Configured AWS hosting, edge caching, and dynamic load balancing to ensure quick response times during multi-million request surges.

Yoink Executor

- Engineered a high-performance desktop execution utility in C++ and C# for dynamic script injection and game runtime modification, surpassing 2M+ total downloads.
- Reverse-engineered runtime memory structures and dynamic link libraries (DLLs), releasing weekly compatibility patches to maintain execution stability against third-party binary updates.
- Managed community technical support and agile task prioritization for a dedicated development team, reviewing community bug reports and rolling out hotfixes.
